```
  %The final result is a table which gives the list of countries a
country
 %can import the good from according to a rating based on the prefercne
 %matrices above. This is done for each of the country. For example if
 %Brunei needs to import rice, it will show which exporters to import
from
 %would be most lucrative, a lower rating is a more lucrative trading
 %partner.
 %Another similar table is made for wheat.
```

```
%The last two tables displayed show the list once some of the importers
 %and exporter countries are deleted.
 %If a country has a 0 trade deficit, that means the country does not
need
 %to import and export the good.
 %If a country is in surplus of the good, it cannot be an importer
 %If a country is in deficit of the good, it cannot be an exporter.
 %The new list is then displayed once these changes are incorporated.
